

System and method for customized build-to-order assembly

Abstract

5 A method and system for configuring a product assembled
from a plurality of components, where each component may
be available in several variants; the method comprises
the steps of presenting to a user, via a user interface,
a first plurality of available variants of a first one of
said plurality of components; receiving from a user an
10 indication of a first variant selected from the first
plurality of variants; receiving inventory data from an
inventory management system, the inventory data indicat-
ing an available subset of the first plurality of avail-
able variants as being in stock; indicating to the user,
15 via the user interface, the first subset of the first
plurality of available variants as being selectable.
